

William B. Gragg

Publications:

1. Generalized multistep predictor-corrector methods (with Hans J. Stetter). *J. Assoc. Comput. Mach.* **11** (1964) 188-209.
2. Repeated extrapolation to the limit in the numerical solution of ordinary differential equations. Doctoral dissertation (Peter Henrici, director). University of California, Los Angeles, 1964. [Unpublished. Widely cited.]
3. On extrapolation algorithms for ordinary initial value problems. *SIAM J. Numer. Anal.* **2** (1965) 384-403.
4. Two algorithms of Romberg type for ordinary initial value problems. *Information Processing 1965, Proc. IFIP Congress 65*, pp. 564-565. Spartan Books, Washington, D.C., 1966.
5. On a theorem of Koenig (with A.S. Householder). *Numer. Math.* **8** (1968) 370-379.
6. Truncation error bounds for g-fractions. *Numer. Math.* **11** (1968) 370-379.
7. Truncation error bounds for pi-fractions. *Bull. Amer. Math. Soc.* **76** (1970) 1091-1094.
8. The Pade table and its relation to certain algorithms of numerical analysis. *SIAM Rev.* **14** (1972) 1-62.
9. On Hadamard's theory of polar singularities, in *Pade Approximants and Their Applications* (P.R. Graves-Morris, editor), pp. 117-123. Academic Press, London, 1973.
10. Algorithmic almost best uniform rational approximation with error bounds (Abstract, with A.P. Frankel). *SIAM Rev.* **15** (1973) 418-419.
11. Optimal error bounds for the Newton-Kantorovich theorem (with R.A. Tapia). *SIAM J. Numer. Anal.* **11** (1974) 10-13.
12. Matrix interpretations and applications of the continued fraction algorithm. *Rocky Mountain J. Math.* **4** (1974) 213-225.
13. The Laurent-Pade table (with G.D. Johnson), in *Information Processing 1974, Proc. IFIP Congress 74*, pp. 632-637. North-Holland, Amsterdam, 1974.
14. A stable variant of the secant method for solving nonlinear equations (with G.W. Stewart). *SIAM J. Numer. Anal.* **13** (1976) 889-903.

15. Reorthogonalization and stable algorithms for updating the Gram-Schmidt QR factorization (with J. W. Daniel, L. Kaufman and G. W. Stewart). *Math. Comp.* **30** (1976) 772-795.
16. Laurent, Fourier, and Chebyshev-Pade tables, in *Pade and Rational Approximation, Theory and Application* (E.B. Saff and R.S. Varga, editors), pp. 61-72. Academic Press, New York, 1977.
17. Cyclic rank one update methods for nonlinear least squares problems, in *Very Informal Proceedings of the Gatlinburg VII Meeting on Numerical Linear Algebra*. Computer Science Department, Stanford University, 1978.
18. Numerically stable methods for updating regressions (with R.J. LeVeque and J.A. Trangenstein). *J. Amer. Statist. Assoc.* **74** (1979) 161-168.
19. On least squares exponential sum approximation (with J.W. Evans and R.J. LeVeque). *Math. Comp.* **34** (1980) 203-211.
20. Truncation error bounds for T-fractions, in *Approximation Theory III* (Ward Cheney, editor), pp. 455-460. Academic Press, New York, 1980.
21. On fast computation of superdiagonal Pade fractions (with F.G. Gustavson, D.D. Warner and D.Y.Y. Yun), in *Algorithms and Theory in Filtering and Control* (D.C. Sorensen and R.J.-B. Wets, editors). *Mathematical Programming Study* 18 (1982) 39-42.
22. Fast solution of positive definite Hankel systems of linear equations (with D.D. Warner, in Russian), in *Numerical Methods in Linear Algebra* (E.S. Nikolaev, editor), pp. 10-15. Moscow University Press, 1982. [Translation of [21]].
23. Positive definite Toeplitz matrices, the Arnoldi process for isometric operators and Gaussian quadrature on the unit circle (in Russian), in *Numerical Methods in Linear Algebra* (E.S. Nikolaev, editor), pp. 16-32. Moscow University Press, 1982.
24. On the partial realization problem (with Anders Lindquist). *Linear Algebra Appl.* **50** (1983) 277-319.
25. Two constructive results in continued fractions (with D.D. Warner). *SIAM J. Numer. Anal.* **20** (1983) 1187-1197.
26. The numerically stable reconstruction of Jacobi matrices from spectral data (with W.J. Harrod). *Numer. Math.* **44** (1984) 317-335.
27. The QR algorithm for unitary Hessenberg matrices. *J. Comput. Appl. Math.* **16** (1986) 1-8.

28. On the application of orthogonal polynomials to the iterative solution of linear systems of equations with indefinite or non-Hermitian matrices (with L. Reichel). *Linear Algebra Appl.* **88** (1987) 349-371.
29. The generalized Schur algorithm for the superfast solution of Toeplitz systems (with G.S. Ammar), in *Rational Approximation and its Applications in Mathematics and Physics* (J. Gilewicz, M. Pindor and W. Siemaszko, editors), pp. 315-330. *Lecture Notes in Mathematics* 1237, Springer-Verlag, Berlin, 1987.
30. The implementation and use of the fast Schur algorithm (with G.S. Ammar), in *Computational and Combinatorial Methods in Systems Theory* (Christopher I. Byrnes and Anders Lindquist, editors), pp. 265-279. North-Holland, Amsterdam, 1986.
31. On the eigenproblem for orthogonal matrices (with G.S. Ammar and L. Reichel). *Proc. 25th IEEE Conf. on Decision and Control* (Athens), pp. 1963-1966. IEEE, New York, 1986.
32. Singular value decompositions of complex symmetric matrices (with Angelika Bunse-Gerstner). *J. Comput. Appl. Math.* **21** (1988) 41-54.
33. A divide and conquer algorithm for the unitary eigenproblem (with L. Reichel), in *Hypercube Multiprocessors 1987* (Michael T. Heath, editor), pp. 639-647. *Soc. Indust. Appl. Math.*, Philadelphia, 1987.
34. Determination of Pisarenko frequency estimates as eigenvalues of an orthogonal matrix (with G.S. Ammar and L. Reichel), in *Advanced Algorithms and Architectures for Signal Processing II* (F.T. Luk, editor), *Proceedings of the Society of Photo-Optical Instrumentation Engineers (SPIE)* 826 (1987) 143-145.
35. Superfast solution of real positive definite Toeplitz systems (with Gregory S. Ammar), *SIAM J. Matrix Anal. Appl.* **9** (1988) 61-76. [Also in *Linear Algebra and its Role in Signals, Systems, and Control* (B.N. Datta, C.R. Johnson, M.A. Kaashoek, R.J. Plemmons and E. D. Sontag, editors), SIAM, Philadelphia, 1988, pp. 107-125.]
36. On singular values of Hankel operators of finite rank (with L. Reichel). *Linear Algebra Appl.* **121** (1989) 53-70.
37. Numerical experience with a superfast real Toeplitz solver (with Gregory S. Ammar). *Linear Algebra Appl.* **121** (1989) 185-206.
38. Constructing a unitary Hessenberg matrix from spectral data (with Gregory Ammar and Lothar Reichel), in *Numerical Linear Algebra, Digital Signal Processing and Parallel Algorithms* (Gene H. Golub and Paul Van Dooren, editors), pp. 385-395. Springer-Verlag, Berlin, 1991.

39. $O(n^2)$ reduction algorithms for the construction of a band matrix from spectral data (with Gregory S. Ammar). *SIAM J. Matrix Anal. Appl.* **12** (1991) 426-431.
40. FORTRAN subroutines for updating the QR decomposition (with L. Reichel). *ACM Trans. Math. Software* **16** (1990) 369-377.
41. A divide and conquer method for unitary and orthogonal eigenproblems (with L. Reichel). *Numer. Math.* **57** (1990) 695-718.
42. Discrete least squares approximation by trigonometric polynomials (with G.S. Ammar and L. Reichel). *Math. Comp.* **57** (1991) 273-289.
43. Convergence of the shifted QR algorithm for unitary Hessenberg matrices (with Tai-Lin Wang). *Math. Comp.* **30** Nov 2001 (electronic publication).
44. Convergence of the unitary Hessenberg QR algorithm with unimodular shifts (with Tai-Lin Wang). *Math. Comp.*, to appear 2002.
45. Solution of ordinary differential initial value problems on an Intel hypercube (with L. Lustman and B. Neta). *Comput. Math. Applic.* **23** (1992) 65-72.
46. DOWDATING OF SZEGO POLYNOMIALS AND DATA FITTING APPLICATIONS (with G.S. Ammar and L. Reichel). *Linear Algebra Appl.* **172** (1992) 315-336.
47. An analogue for Szego polynomials of the Clenshaw algorithm (with G.S. Ammar and L. Reichel). *J. Comput. Appl. Math.* **46** (1993) 211-216.
48. Parallel divide and conquer algorithms for the symmetric tridiagonal eigenproblem and bidiagonal singular value problem (with John R. Thornton and Daniel D. Warner), in *Modeling and Simulation, Volume 23, Part 1* (William G. Vogt and Marvin H. Mickle, editors). Univ. Pittsburgh School of Engineering, 1992, pp. 49-56.
49. On computing accurate singular values and eigenvalues of matrices with acyclic graphs (with James W. Demmel). *Linear Algebra Appl.* **185** (1993) 203-218.
50. Positive definite Toeplitz matrices, the Arnoldi process for isometric operators, and Gaussian quadrature on the unit circle. *J. Comput. Appl. Math.* **46** (1993) 183-198. [English translation of [23]].
51. Schur flows for orthogonal Hessenberg matrices (with Gregory S. Ammar), in *Hamiltonian and Gradient Flows, Algorithms and Control*

- (Anthony M. Bloch, editor). Fields Institute Communications, volume 3, pp. 27-34. American Mathematical Society, Providence, 1994.
52. Inverse problems for orthogonal matrices, Toda flows, and signal processing (with L. Faybusovich and G.S. Ammar), in Proc. 31st Conf. on Decision and Control, IEEE, New York, 1992, pp. 1488-1493.
 53. Direct and inverse unitary eigenproblems in signal processing: an overview (with G.S. Ammar and L. Reichel), in Linear Algebra for Large Scale and Real Time Applications (M.S. Moonen, G.H. Golub and B.L.R. De Moor, editors). NATO ASI Series E, Vol. 232, Kluwer Academic Publishers, Dordrecht, The Netherlands, 1993, pp. 341-343.
 54. Some inverse eigenproblems for Jacobi and arrow matrices (with Carlos F. Borges and Ruggero Frezza). Numerical Linear Algebra with Applications **2** (1995) 195-203.
 55. A parallel divide and conquer algorithm for the generalized real symmetric definite tridiagonal eigenproblem (with Carlos F. Borges), in Numerical Linear Algebra and Scientific Computing (L. Reichel, A. Ruttan and R.S. Varga, editors). de Gruyter, Berlin, 1993, pp. 10-28.
 56. Divide and conquer for generalized real symmetric definite tridiagonal eigenproblems (with Carlos F. Borges), in Proceedings of '92 Shanghai International Numerical Algebra and its Applications Conference (Jiang Er-xiong, editor). China Science and Technology Press, Beijing, 1994, pp. 70-76.
 57. Stable look-ahead versions of the Euclidean and Chebyshev algorithms (with Martin H. Gutknecht), in Approximation and Computation (R.V.M. Zahar, editor), International Series of Numerical Mathematics, Birkhauser Verlag, Basel, 1994, pp. 231-260.
 58. Notes on tqr algorithms (with K. Gates). J. Comput. Appl. Math. **86** (1997) 195-203.
 59. Stabilization of the uhqr algorithm?, in Advances in Computational Mathematics (Z. Chen, Y. Li, C. Micchelli and Y. Xu editors), Lecture Notes in Pure and Applied Mathematics vol. 202. Marcel Dekker, Hong Kong, 1999, pp. 139-154.
 60. Computation of Gauss-Kronrod quadrature rules (with D. Calvetti, G.H. Golub and L. Reichel). Math. Comp. **69** (2000) 1035-1052.
 61. An $O(n^2)$ algorithm (shqz) for polynomials zeros (with Gregory S. Ammar and Chunyang He). In preparation.
 62. Polynomial zero finders based on Szego polynomials (with G.S. Ammar, D. Calvetti and L. Reichel). J. Comp. Appl. Math. **127** (2001) 1-16.
