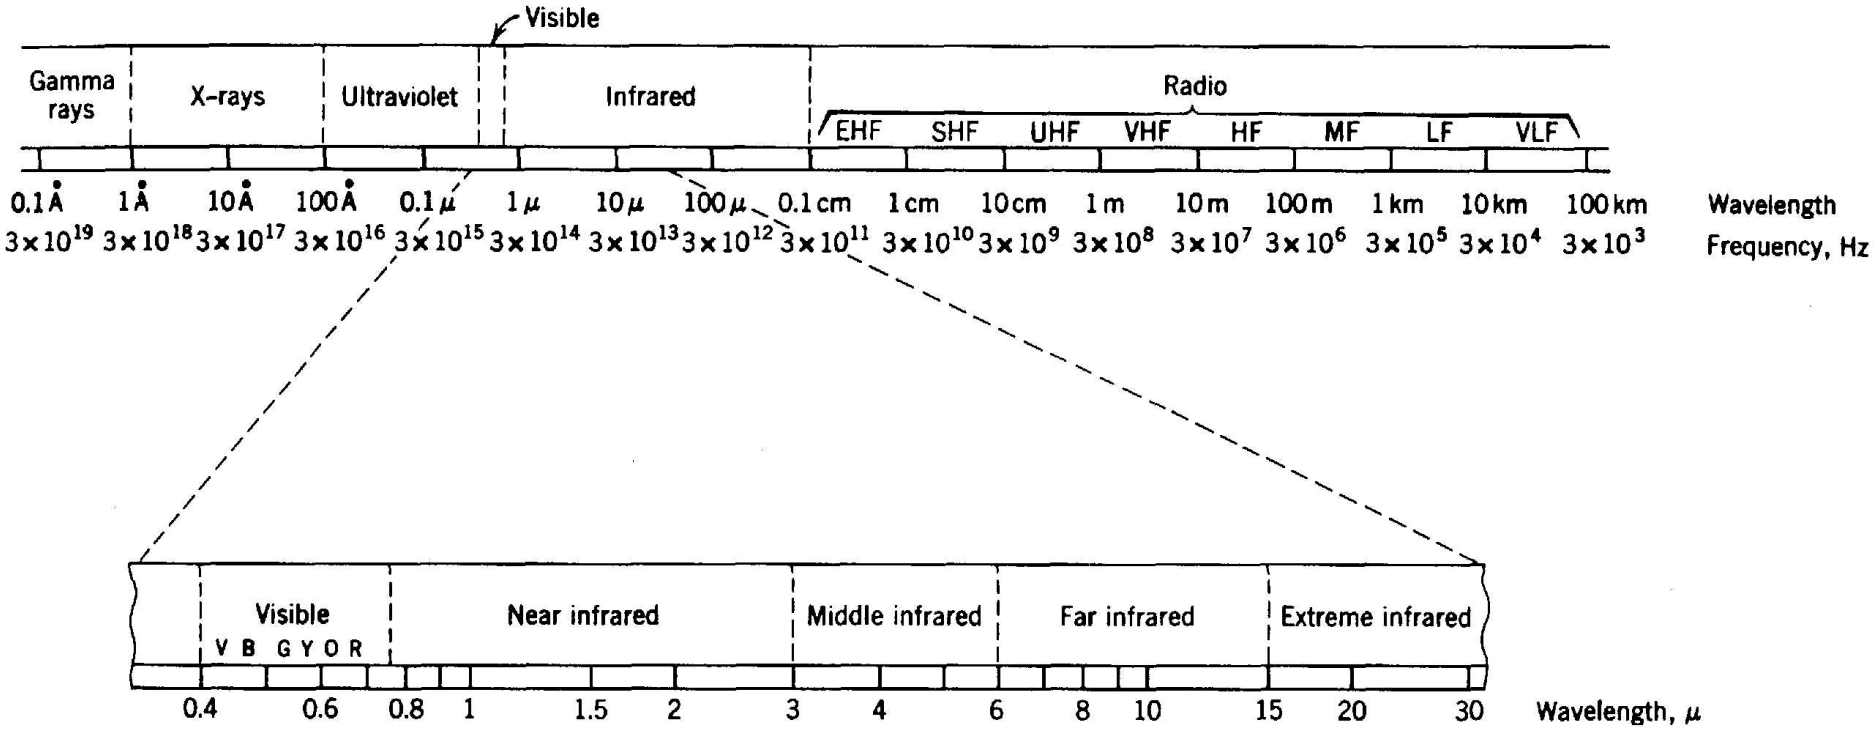
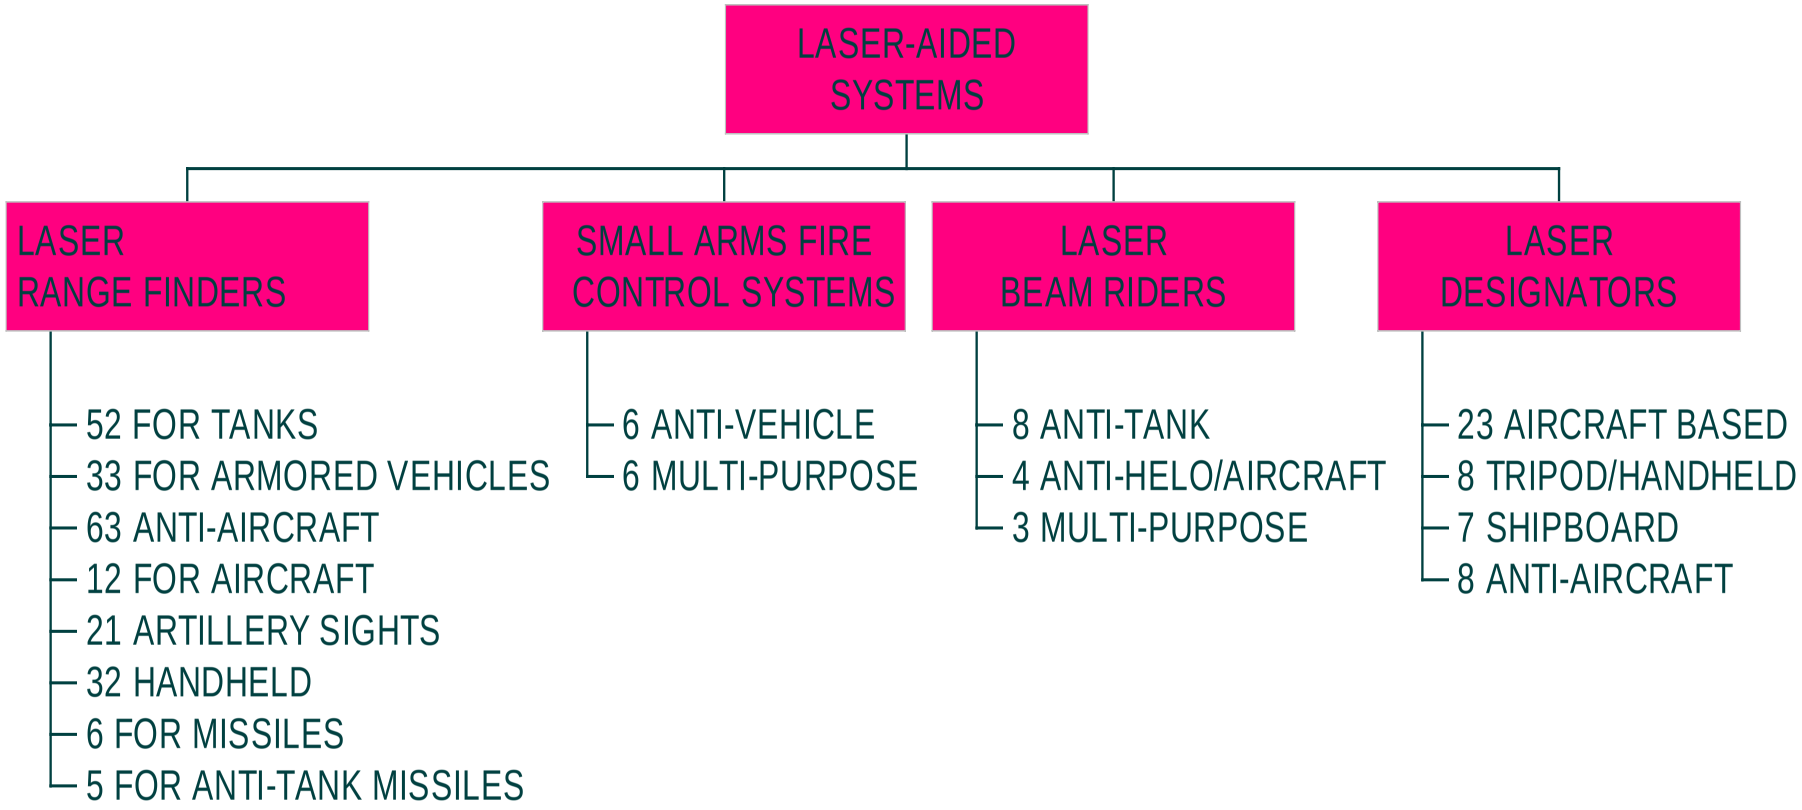
Military Applications of Lasers: An Overview

Professor John P. Powers
Department of Electrical and Computer Engineering
Naval Postgraduate School
Monterey California 93943

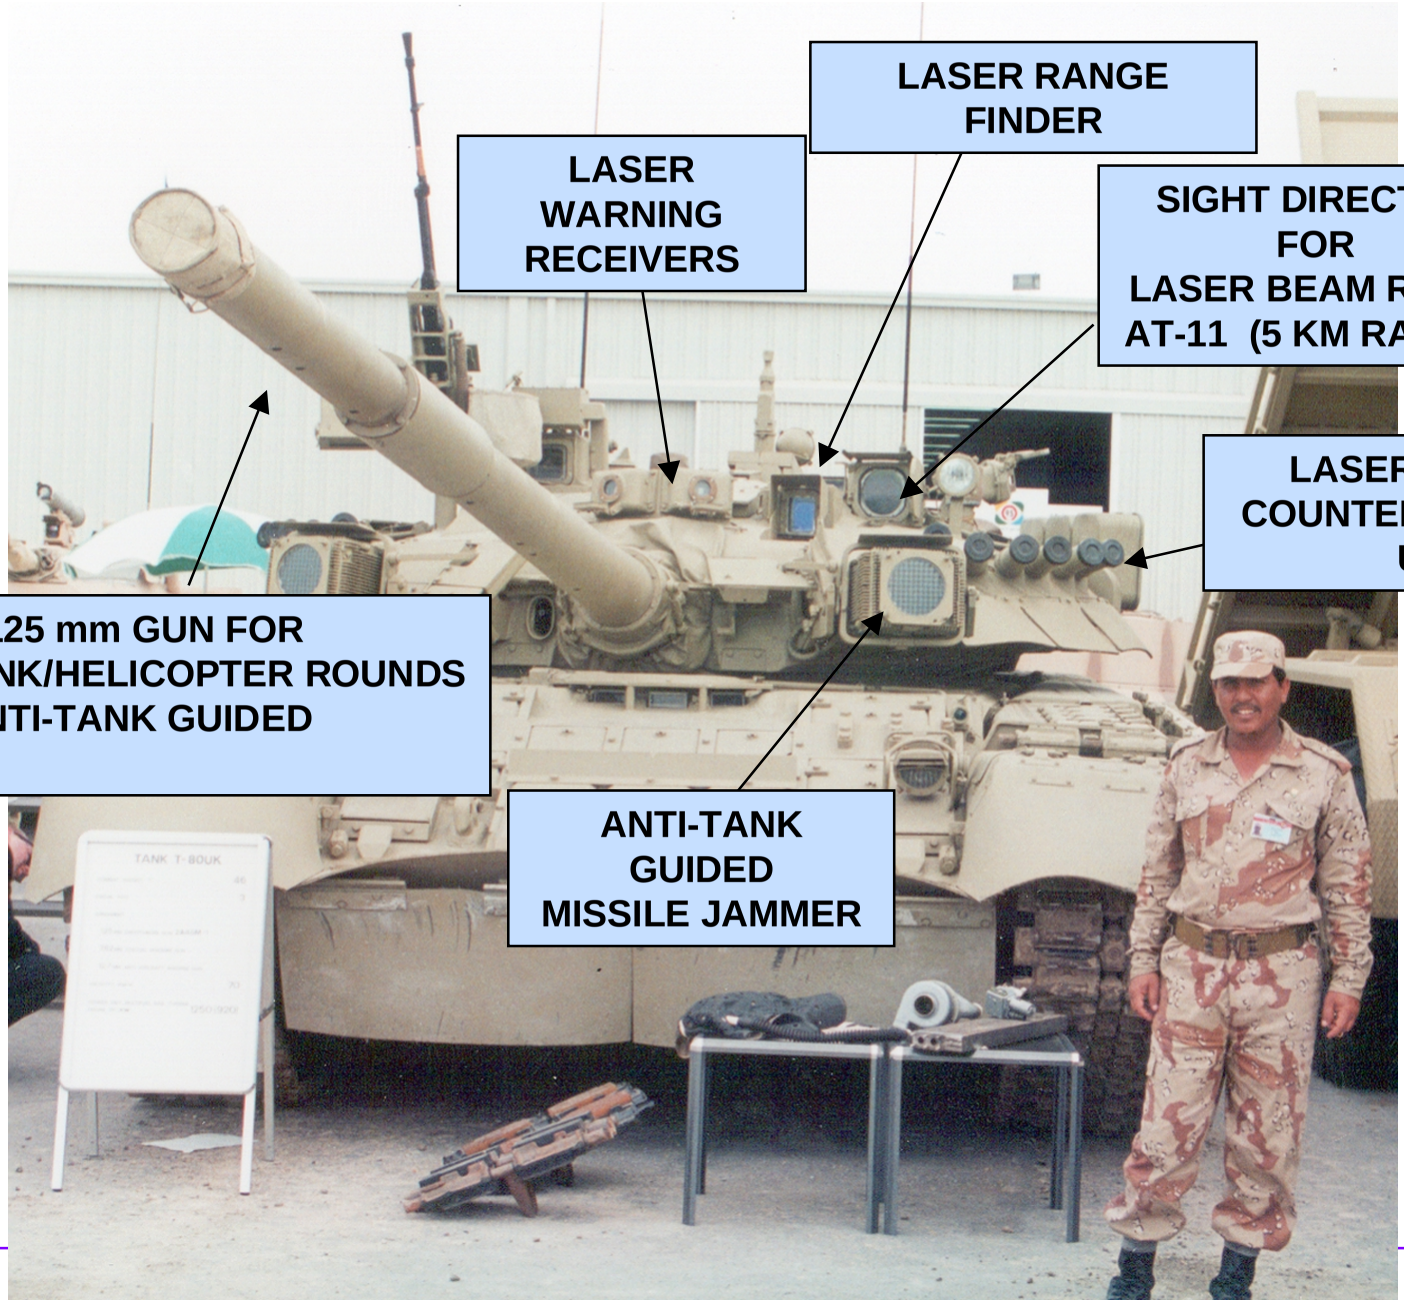
The Optical Spectrum



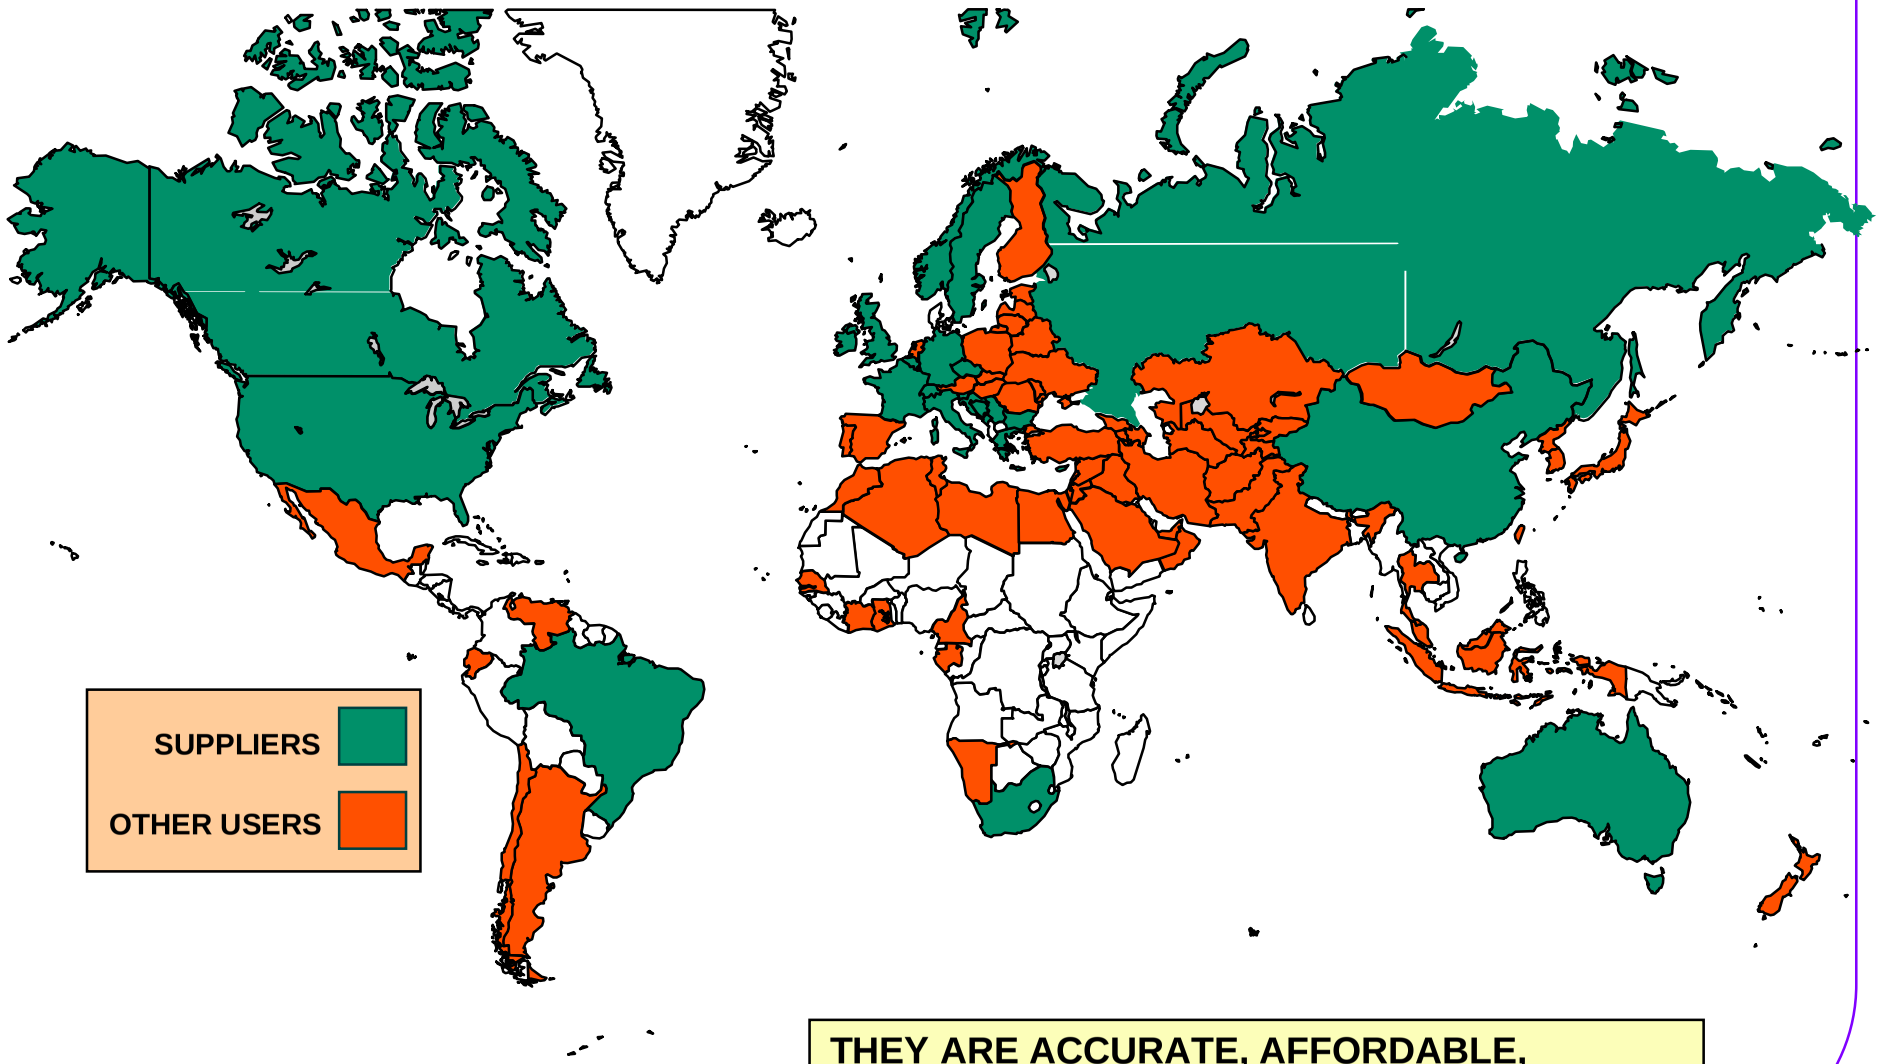
Laser Threats



Modern EO Systems

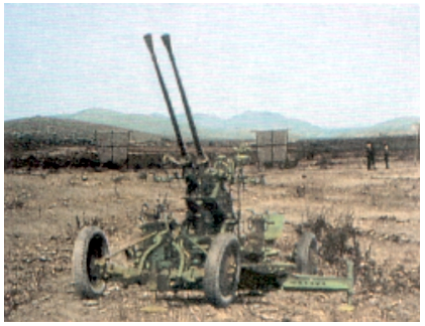


Suppliers and Users

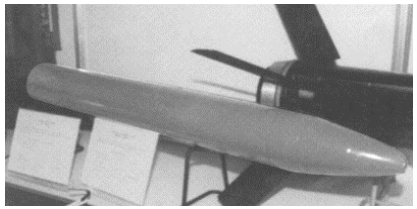


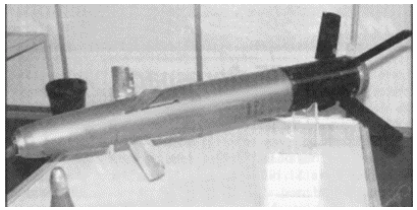
THEY ARE ACCURATE, AFFORDABLE, LETHAL AND AGGRESSIVELY MARKETED.

Recent Additions



- Portable Beam Riders
  - –Many are small and portable
  - –They can be hidden anywhere - bushes, trees, small boats
  - –No radar is needed - no radar warning receiver alert





- Anti-Aircraft Artillery Laser Fire Control Upgrades
  - –Italian VANTH/MB Fire Control System for local control of anti-aircraft field guns
  - –Chinese (NORINCO) laser course director for manual 37 millimeter guns
    - With or without their own servo system
    - Improves firing accuracy 2 to 3 times

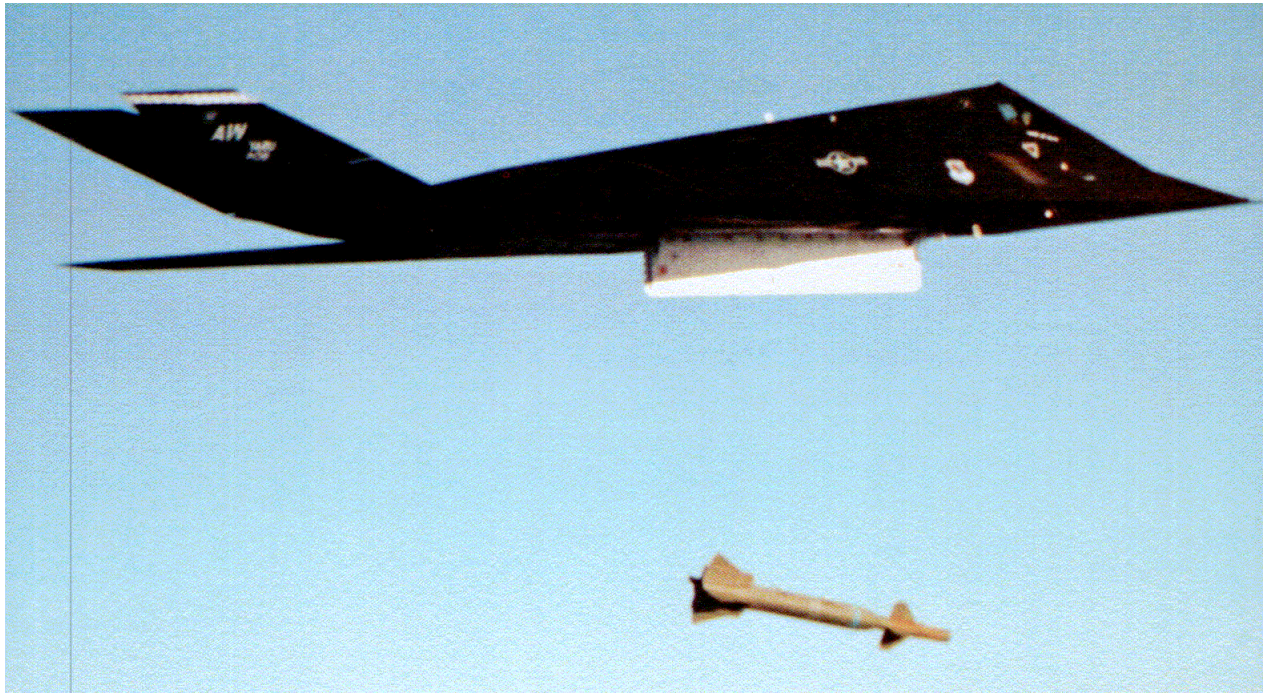
- Laser Designated Artillery Projectiles
  - –Russian Kitolov
    - 122 /120 millimeter versions
    - High explosive warhead
    - Fired by D30, 2S1 howitzers, combo guns
    - 12 kilometer range
  - –Russian Krasnopol
    - 152 millimeter
    - Fired by new 2S19 self-propelled gun, older 2S3M, 2A65 and D-20 towed artillery

Operation Desert Storm

- Laser-guided weapons
  - GBUs
  - HELLFIRE
  - Maverick
  - SLAM
- Laser rangefinders
  - M1 tank
- FLIRs
  - airborne
  - tank

- Precision guided weapons delivery
  - LANTIRN
  - TRAM
  - PAVE TACK
  - TIALD
  - ATLAS
  - TADS/PNVS

Precision Guided Weapons

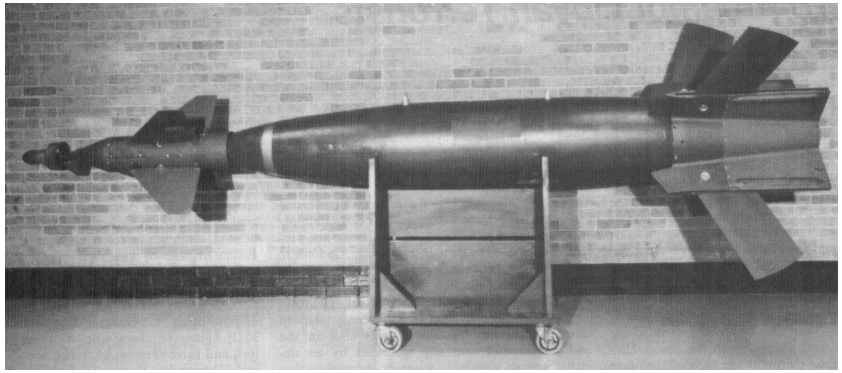


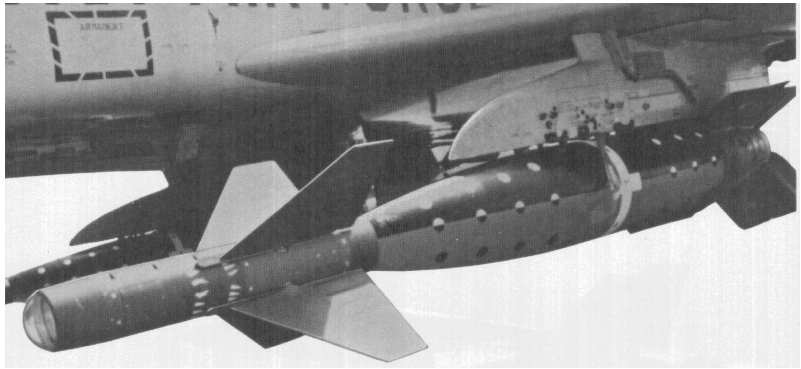
Laser Target Designators

- Application:
  - Precision guidance of munitions to laser spot on target
- Lasers used:
  - Nd:YAG
  - CO2 (R&D)
- Advantages
  - Increased accuracy
  - Integration with thermal imagers and laser spot trackers in weapons delivery system

- Systems
  - GLLD (Army), MULE (USMC), TRAM (USN), LANTIRN (USAF),
- Problems
  - Degraded by obscurants and weather
  - Must maintain beam on target during weapons delivery
- Status:
  - Proven technology
  - Expect proliferation of systems to third world

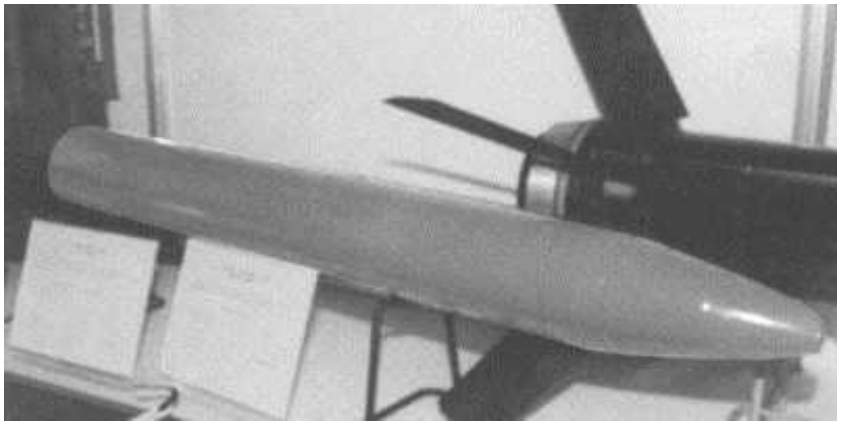
Guided Bombs

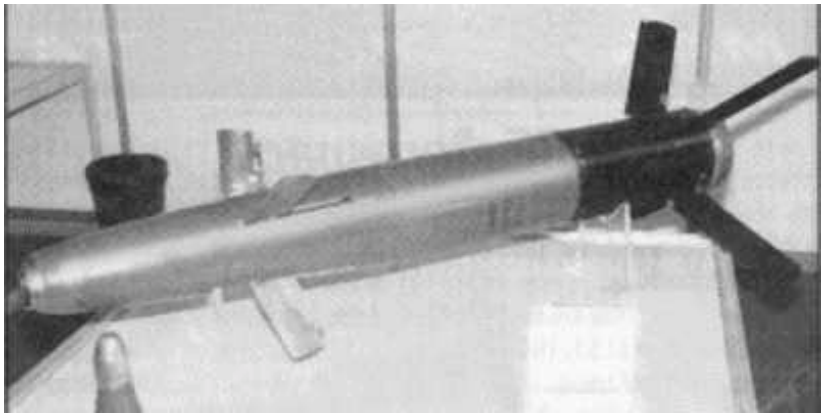




- Left - USAF/Texas Instruments Paveway 2 laser-guided bomb
- Right - Paveway III laser-guided bomb

Guided Artillery





- Russian Kitolov round
- Russian Krasnopol round

Precision Delivery (cont)

- Left - Guided bomb
- Right - AGM-65E Laser Maverick missile

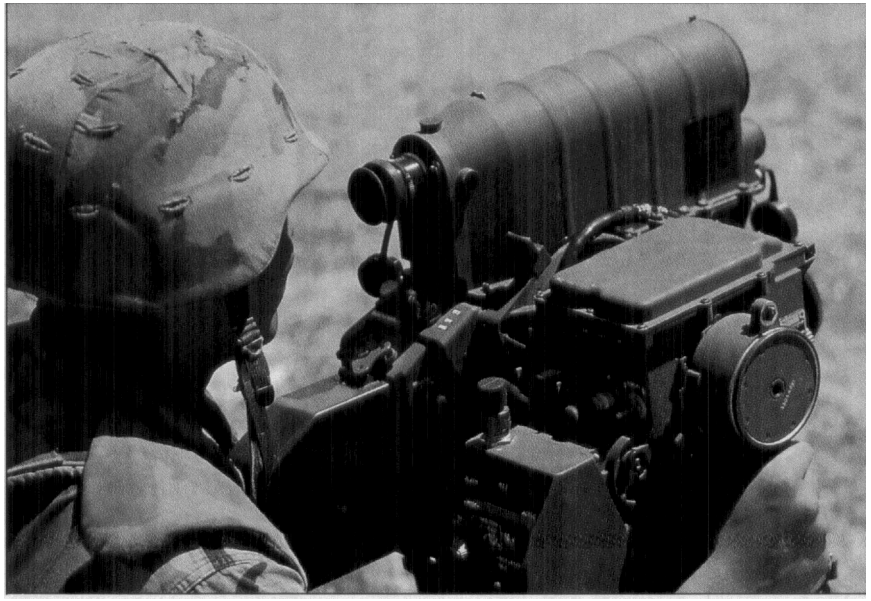
International Systems

- Left - French Mirage 2000 D/S with laser designator pod
- Right - French Matra 1,000 kg bomb dropped from Mirage 2000
  - Available to export customers as option on Mirage 2000

GLLD

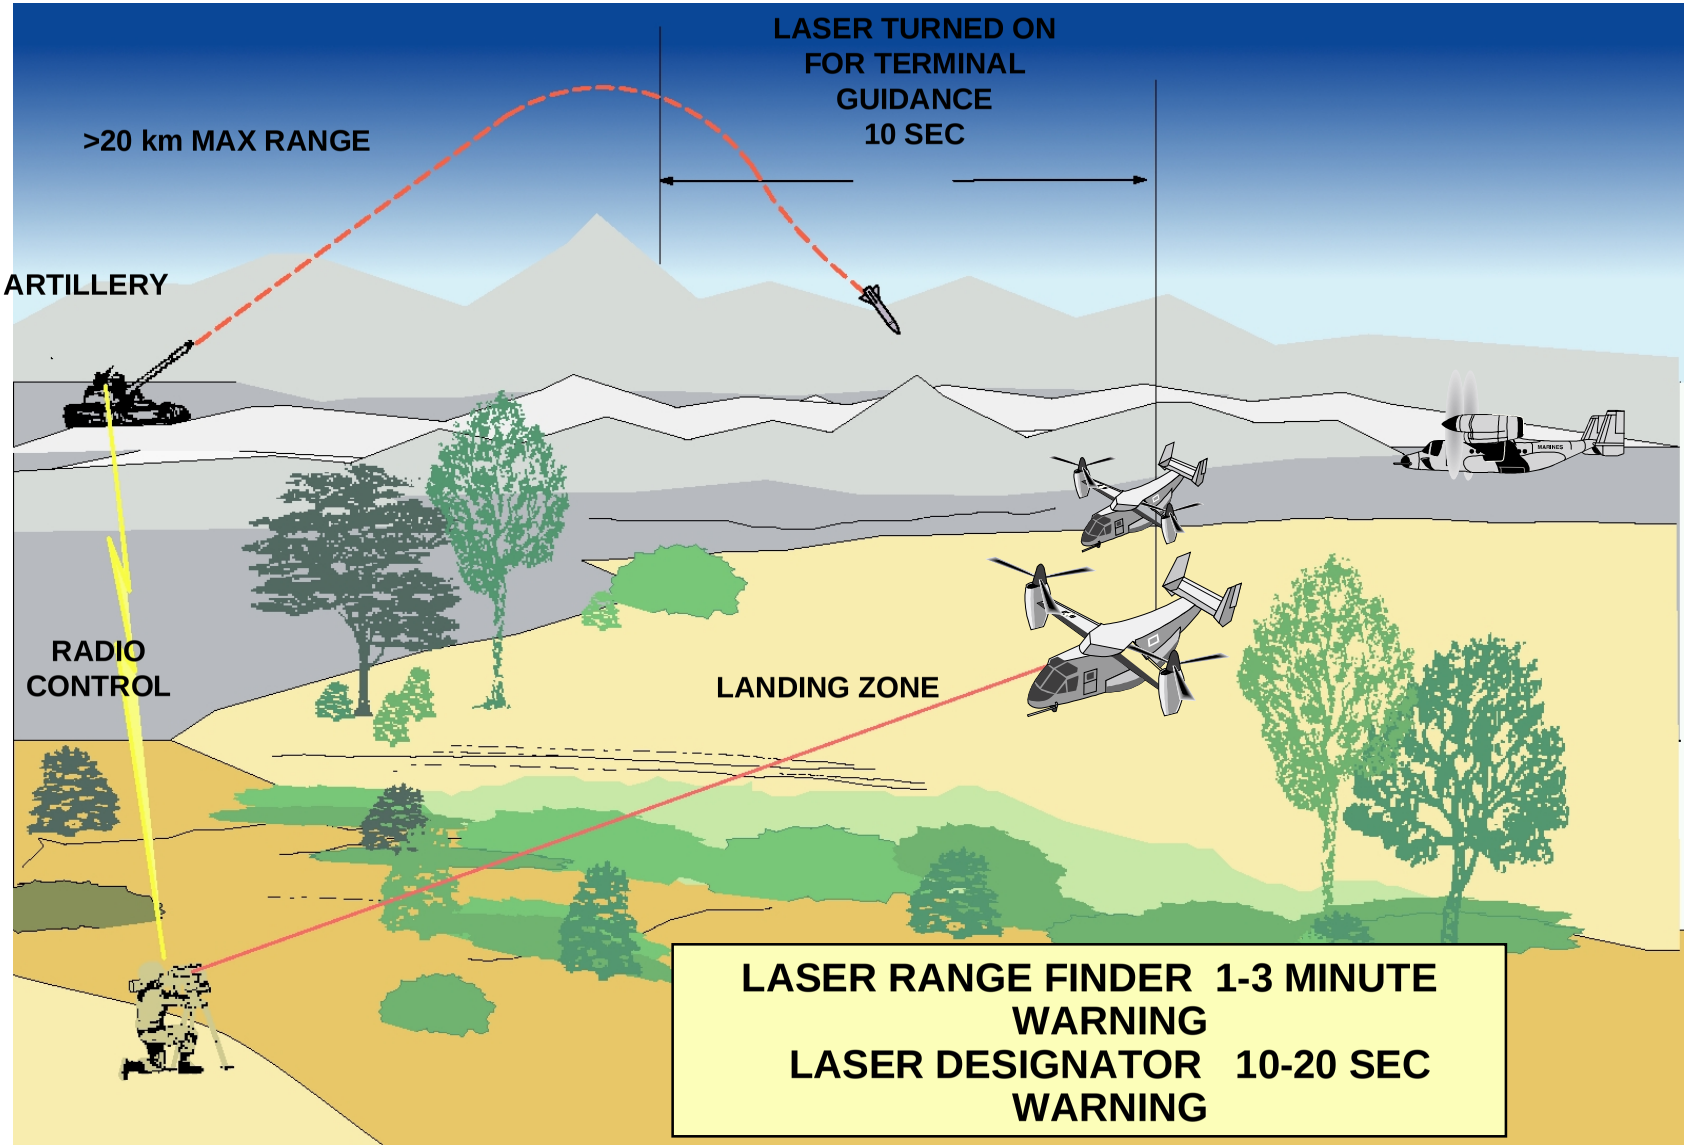
- Army GLLD (Ground Locator Laser Designator)

MULE



- Modular Universal Laser Equipment (MULE)

Laser Designator Artillery



Laser Rangefinders

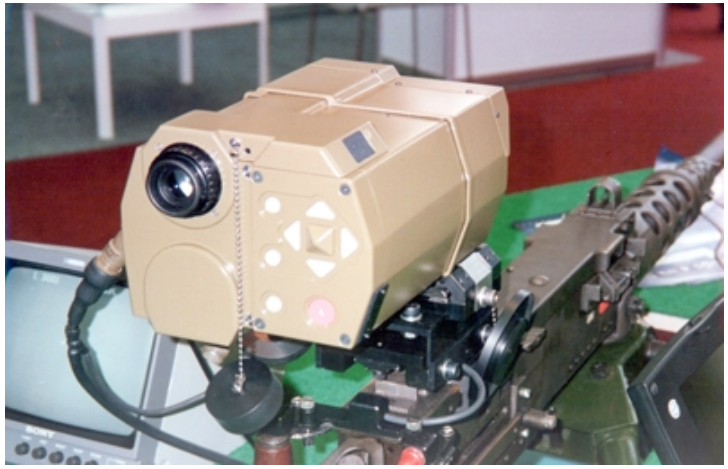
- Application
  - Precision ranging to target for increased fire-control solution accuracy
- Lasers used
  - Ruby (early versions)
  - Nd:YAG
- Advantages
  - Increased accuracy
- Problems
  - Degraded by obscurants

- Status
  - ⇨ Mature technology
  - ⇨ Combined with laser designators
  - ⇨ R&D for eyesafe versions (Er:glass and Raman- shifted)

Some Rangefinder Threats

Russian T80UK

NORINCO AAA Upgrade System



Multipurpose Universal
Gunner Sight (MUGS) 4MK II

BOFORS 40 Millimeter BOFI Gun System

More Threats

ATLAS - Short Range Air Defense System

- E/O Sensor
  - IR
  - TV
  - Eye safe LRF
- Multiple Missile Combinations
  - SA-16
  - RBS-70
  - MISTRAL
  - STINGER

CIS 2S6 Tugunska

- E/O Sensor with LRF
  - •Radar
  - •Combination
  - Dual 30 mm gun
  - SA-19 missiles

Handheld Rangefinders

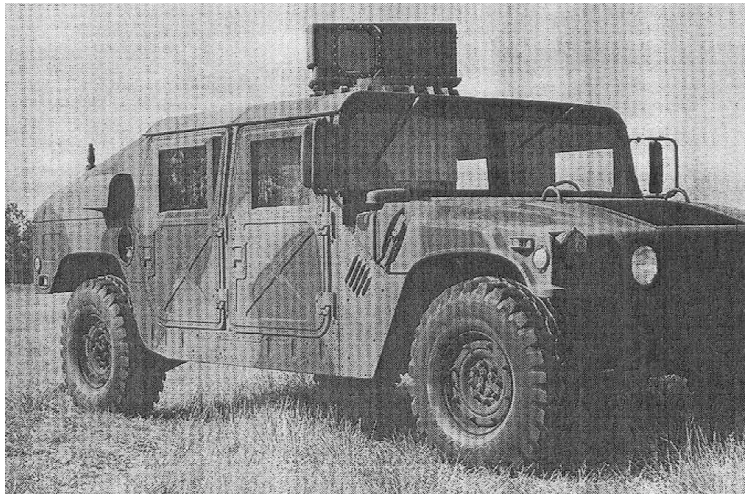
- Handheld laser rangefinder
- Laser rangefinder image

Handheld Rangefinders

- Prototype for the laser speedgun

Electro-optic Countermeasures(EOCM)

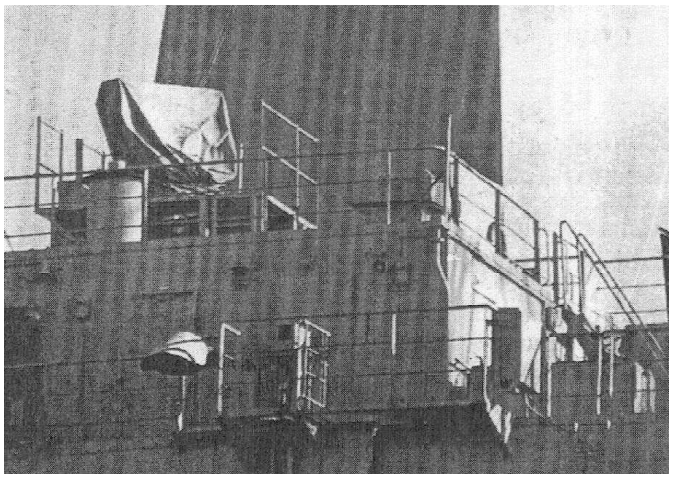
- Application
  - EO device jammers
  - Illumination warning receivers
- Lasers used
  - Various (Nd, CO2)
- Problems
  - Reliability of jammer lasers
  - Cost of jammer lasers
  - Lack of widespread threat



- Status
  - Low level R&D
  - Not widely deployed
  - increased threat should bring increased development

Laser Dazzling and Blinding

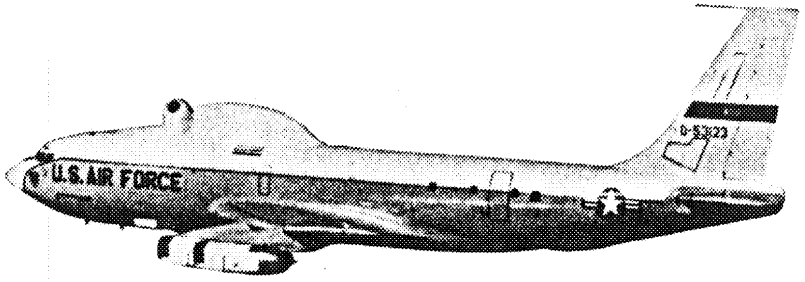
- Application
  - Use of lasers to "dazzle" or blind EO sensors
- Lasers used
  - Nd, CO2, pulsed ruby
- Problems
  - 1995 treaty bans development of “blinding” weapons
  - Contrary to Geneva Convention to injure human vision
  - Cannot blind electronic sensors w/o blinding human observers
- Status: very low R&D



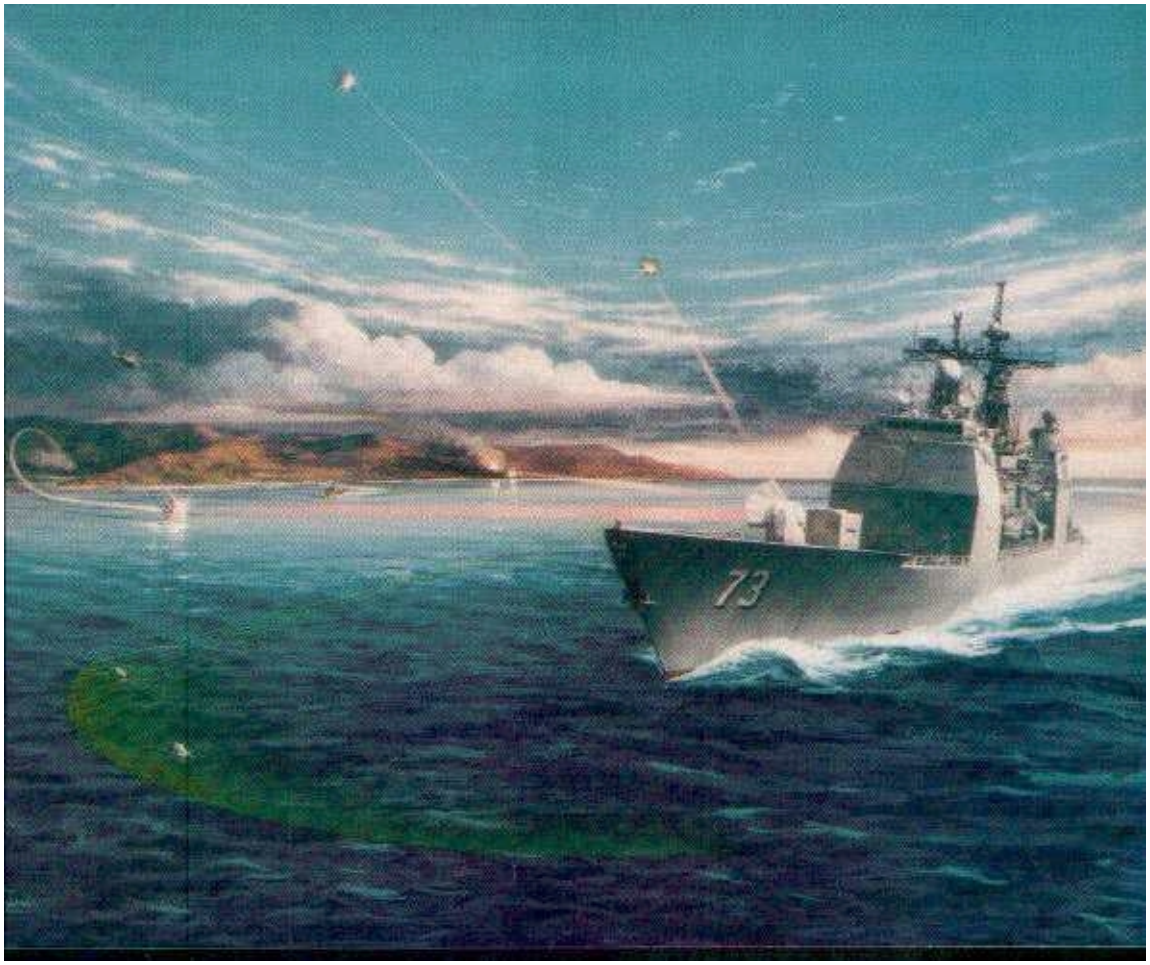
Laser Weapons

- Application
  - Strategic defense
  - Tactical point defense of high-value targets
- Lasers used
  - CO2 gasdynamic lasers
  - Chemical lasers (HF/DF, oxygen iodine)
  - Excimer lasers
  - Free-electron lasers

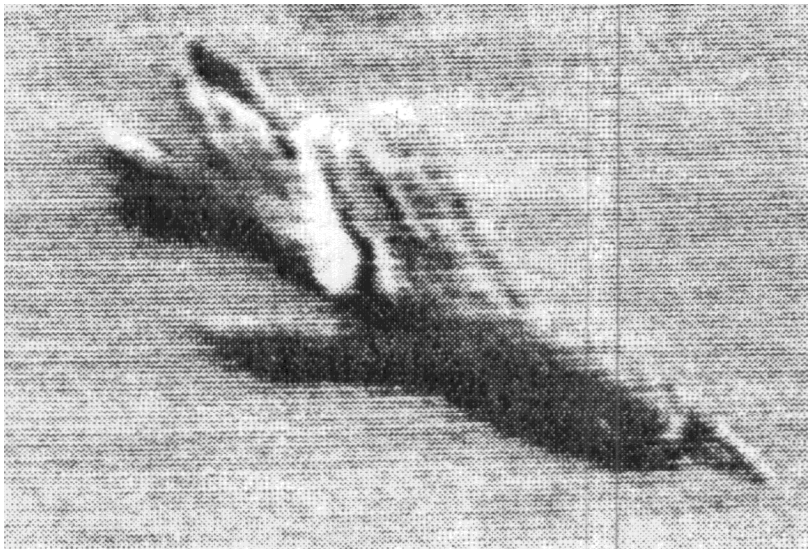
- Problems
  - Laser size and efficiency
  - Prime power generator
  - Atmospheric propagation
  - Pointing and tracking
  - Marginal operational capability
- Status
  - Researched since mid 60s
  - Still long-term R&D

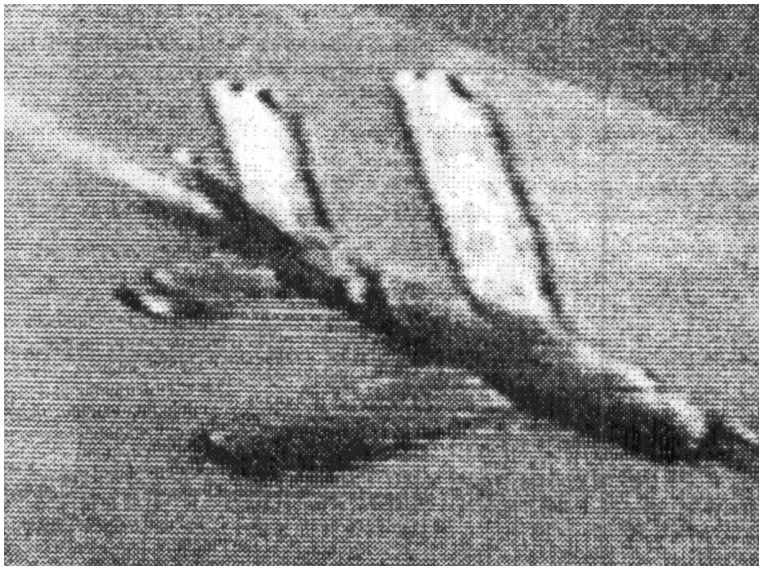


HEL Navy Applications



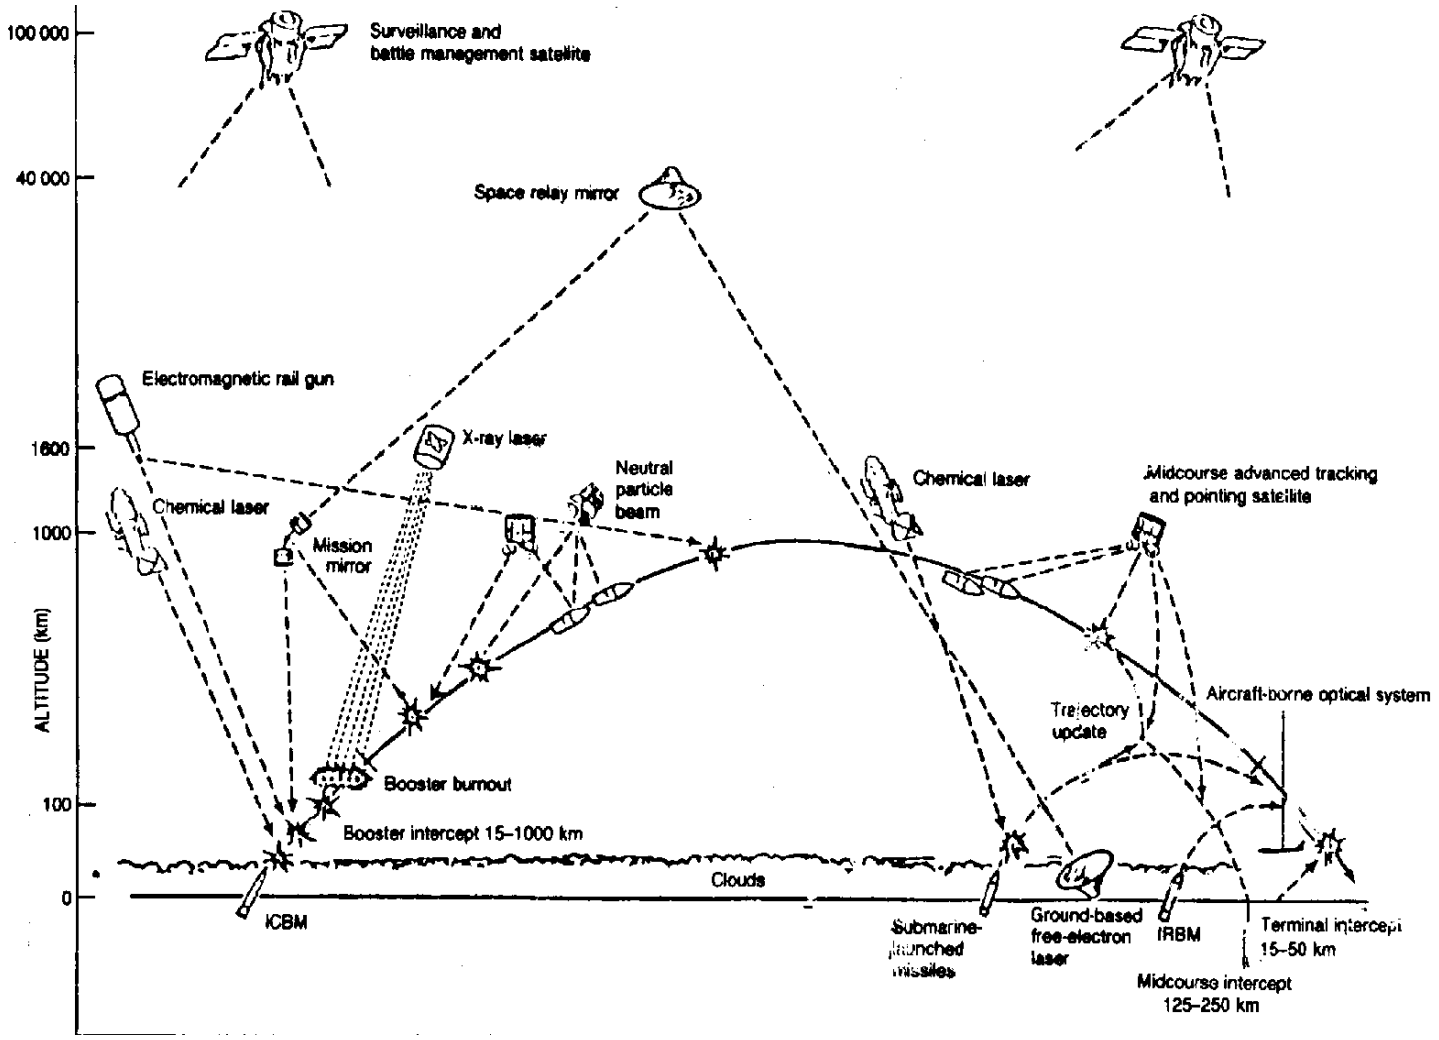
Lethality Demonstration





- Drone

Strategic Defense (SDI)



- Layered defense from ICBM and Theater Missiles

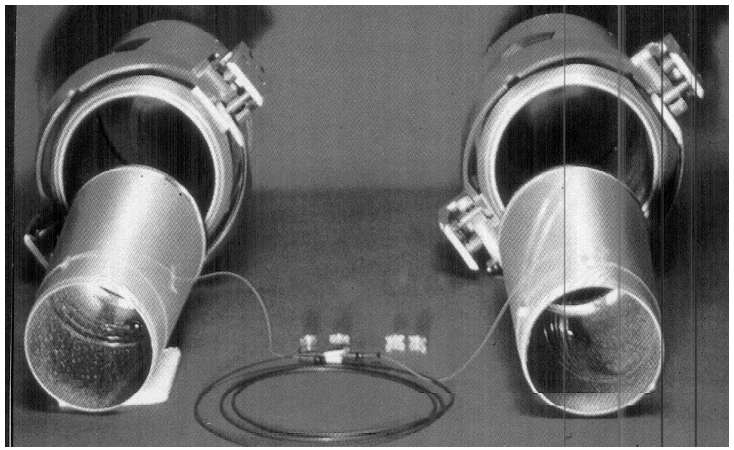
Ground-Based Optical Communications

- Applications
  - High data-rate, LPI communications
- Lasers used
  - CO2 (Navy)
  - Diode lasers (Army, Navy)
  - Diode lasers for fiber optics (all services)
- Problems
  - Lack of broadcast capability (point-to-point only)
  - Range limited to line-of-sight
  - Battlefield and sea obscurants
- Status
  - Demonstration systems

Tethered Remotely-Piloted Vehicles

- Application
  - Control of remote vehicles and missiles by fiber optic links
- Lasers used
  - Diode lasers
- Advantages
  - Antijam capability
  - No radio-location of controlling site
- Status
  - Developmental programs by joint service office (RPVs) and individual services (missiles)

Fiber bobbins



Space/Air to Underwater Communications

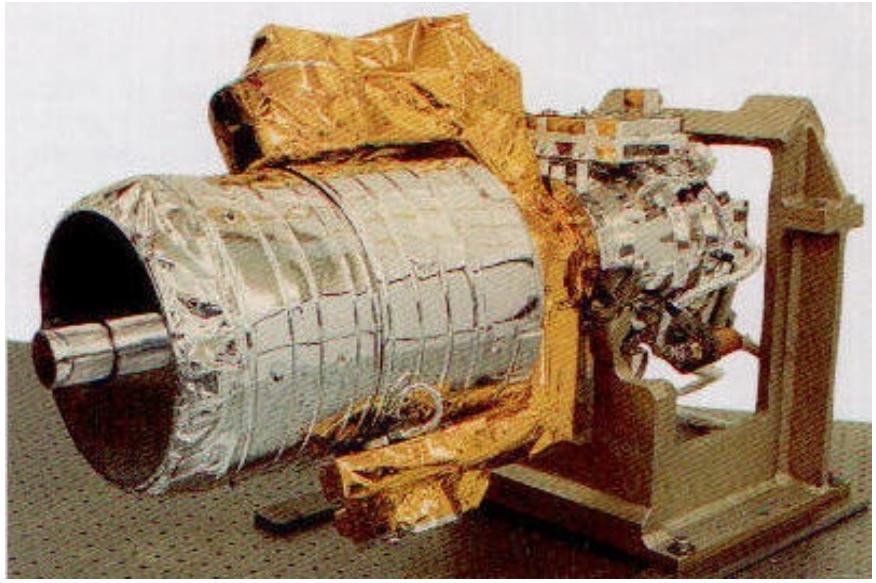
- Application
  - Satellite/aircraft to submarine communications via blue/green laser
  - Moderate data rate
  - One of only two electromagnetic windowsLasers used
  - Frequ? ncy shifted Nd:YAG blue/green lasers
  - Excimer blue lasers (R? man shifted light)

- Problems
  - Flashlamp lifetimes
  - Non-optimum colors
  - Receiver design for signal-to-noise ratio
  - Lead-based frequency shifters
  - Non-cooperative platforms
- Status
  - 15-year-old program
  - DARPA-sponsored
  - Congressional mandate
  - R&D into laser sources (doubled Ti:sapphire, LiAsF)

Space Communications

- Application
  - High data rate, low probability of intercept
  - Satellite-to-satellite data relay
  - Uplinks and downlinks
- Lasers used
  - Frequency-doubled Nd:YAG, CO2
- Problems
  - Space-qualified lasers
  - Laser lifetime (flash tubes, diode pumping)
  - Cost
  - Pointing and tracking difficult

- Status
  - Studied for 15 years, still in R&D
  - New laser sources: diode-pumped lasers



Laser comm for Teledesic satellite array

Laser comm for Teledesic satellite array

Undersea Surveillance

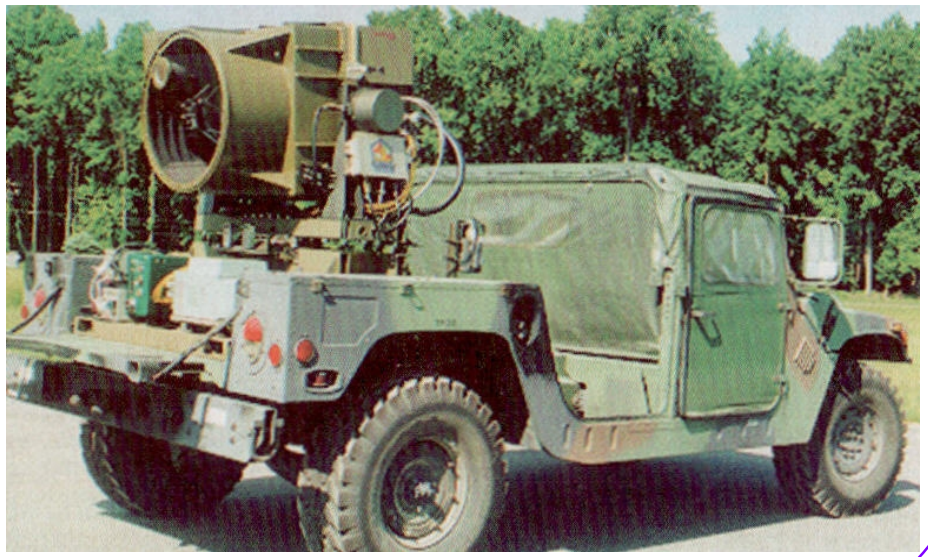
- Application
  - Use of blue-green lasers for shallow-water ASW and minehunting
- Lasers used
  - Frequency-doubled Nd:YAG
  - Pulsed dye
  - Frequency-shifted excimer lasers

- Problems
  - Severe attenuation and back-scatter
  - Depth is function of geographical location
  - Source of illumination is revealed
- Status
  - Studied for 15 years
  - Minehunting being implemented

Biological & Chemical Warfare Agent Detection

- Application
  - Use of tunable laser for remote detection of airborne biological and/ or chemical warfare agents.
- Lasers used
  - Pulsed CO2 (long range)
  - Tuned dye lasers (short-range)
- Problems
  - Lack of lasers at suitable wavelengths
  - Lack of tunability of current powerful lasers (e.g., CO2 can be tune +/- 5%)

- Status
  - Laboratory and field prototype demonstrations
  - Development of more tunable sources.



Ground-Based Laser Radar

- Application
  - Anti-air defense
  - Supplement radars in CM environment
  - Greater accuracy than radar
- Lasers used
  - Nd:YAG, CO2
- Problems
  - Lack of all-weather capability
- Status
  - Army & Navy have built demonstration units

Airborne Doppler Laser Radar

- Application
  - Moving target indicator (MTI) for airborne and surface vehicles
  - High accuracy
  - Useful for wind sensing, target acquisition/ ID/ tracking.
- Lasers used
  - CO2 (frequency stability; heterodyne detection)

- Problems
  - Large size
  - Optical/ electronic complexity
  - Degraded by obscurants.
- Status
  - 15 years of study
  - R&D

Laser Ranging Imaging Systems

- Application:
  - Use a scanning pulsed laser rangefinder to build up high resolution 3-d profile and image
  - Use for target acquisition, id, and tracking
- Advantages
  - High resolution
  - LPI and antijam
- Lasers used:
  - GaAs

- Problems
  - Need more powerful, eye-safe pulsed lasers
- Status
  - R&D into laser sources
  - Demonstration of systems concepts.

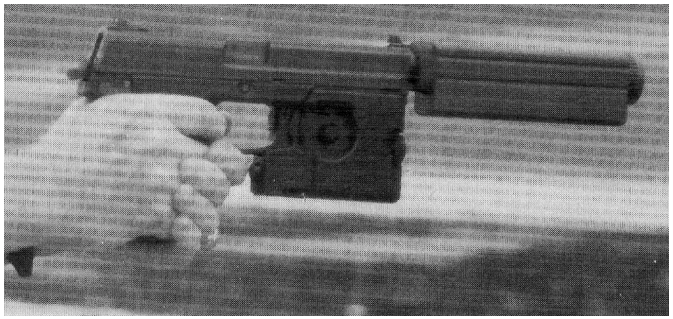
Ordnance Initiation

- Application
  - Fuzing ordnance, use fiber optics to guide laser pulse to detonation point
  - Pulse detection electrically triggers ordnance
- Advantages
  - Immune to EMI and EMP
- Lasers used
  - Pulsed diode lasers
- Status
  - Deployed (e.g., advanced optical fuse/profilometer on TOW-2B)
  - Mature technology
  - Advanced algorithms, discrimination being studied.

IR Aiming Lights

- Application
  - Weapons aiming with night vision goggles
- Advantages
  - Increased weapon aiming precision.
- Problems
  - Degraded by obscurants.
  - Identifies the illuminator.
- Lasers used
  - Pulsed diode lasers bore-sighted with weapon.

- Status
  - Development of GaAs-based devices for night vision systems and CO2 for thermal imaging systems



Laser Weapons Simulators

- Application
  - Simulation of weapons fire for war gaming
- Lasers used
  - HeNe, diode, Nd:YAG
- Deployment
- MILES system widely used at military training sites (Ft. Irwin, Ft. Hood, Ft. Hunter-Liggett)
- Advantages
  - "Free" bullets

- Problems
  - Detector instrumentation of targets
  - Degraded by obscurants
- Status
  - Mature technology.
  - R&D into better obscurant penetration using CO2 and other long wavelengths

Beamrider Systems

RBS-70 Anti-Aircraft Missile System

Short's Starstreak Air Defense Missile System

Starburst Laser Beam Rider Variants

Self-Propelled System

Naval Multiple Launcher

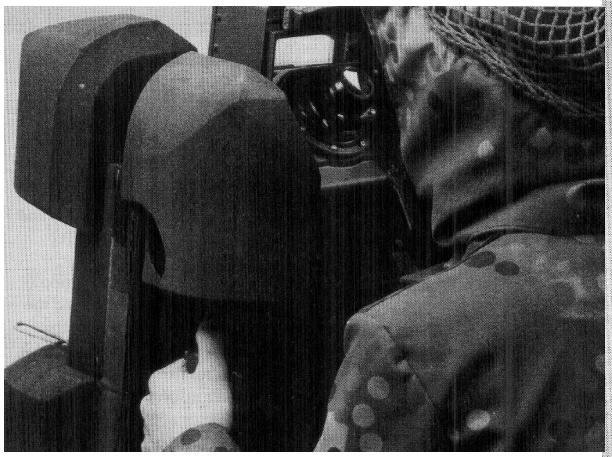
BMP-3

Russian T80UK

Shoulder Launch System

Lightweight Multiple Launcher

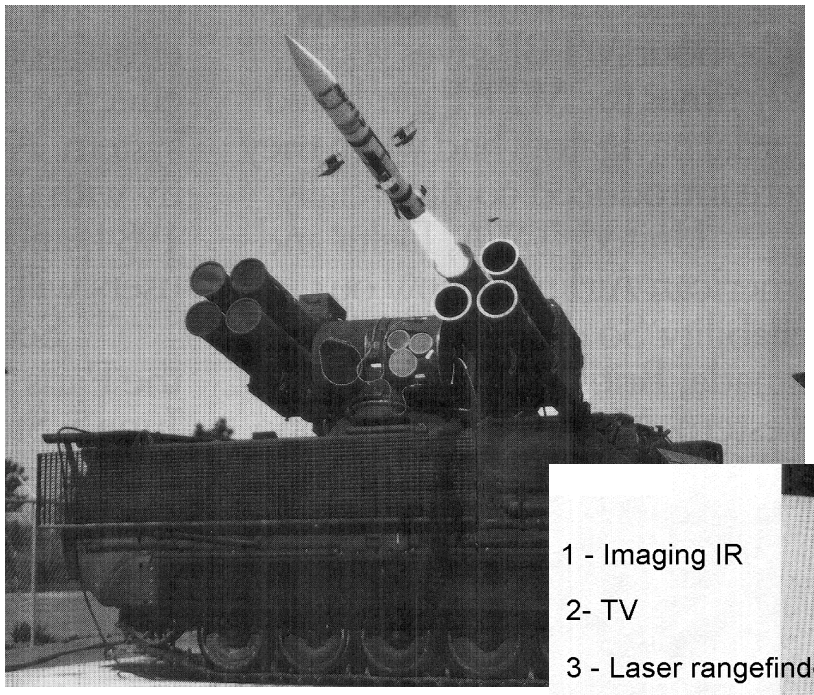
Laser Beam-riding Missiles: RBS-70 and Starstreak



- "Ray-Rider" SAM
- Sweden & export
- 15,000 ft range
- Australian Army (replace Redeye)

- UK
- Short-range SAM

Laser Beam-riding Missiles: ADATS

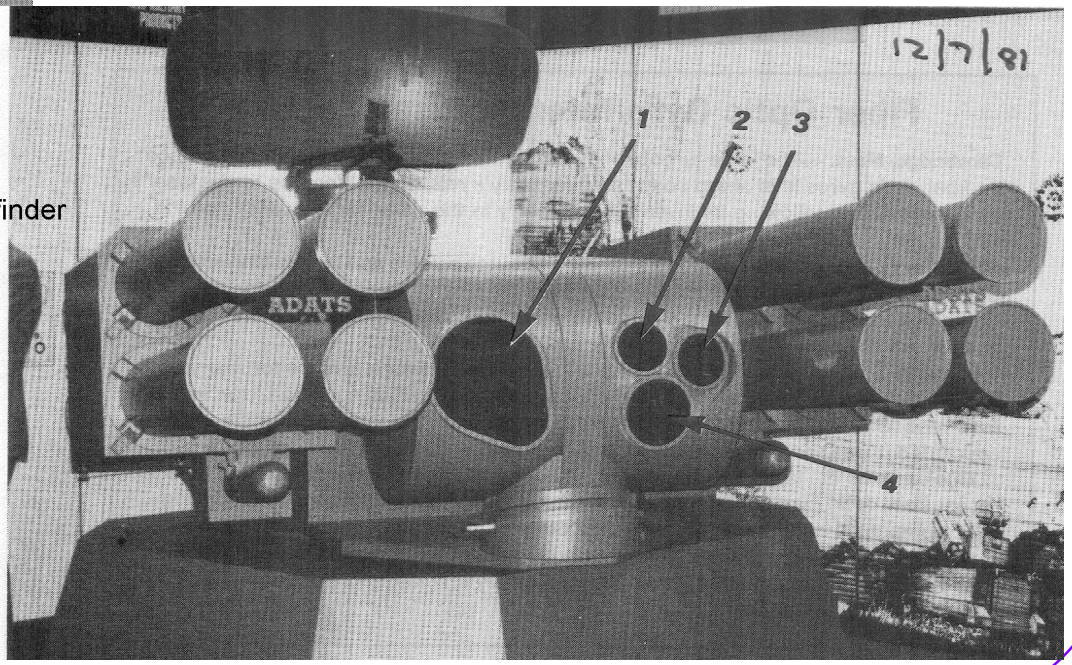


1 - Imaging IR

2- TV

3 - Laser rangefinder

4- Command laser beam



Laser Beam-Riding Missiles

- Application
  - Command guided missile (anti-tank, ground-to-air, air-to-ground) rides laser beam to target
- Advantages
  - Antijam geometry
- Problems
  - Illuminator must track target for entire time-of-flight of missile.
  - Missile cannot be handed off to other controlling location
  - Obscurants present problem (includes missile exhaust)
- Status
  - Several beam-rider systems operational and available for export market

Summary

- Laser technology...
  - is here
  - works
  - opens a new window in the electromagnetic spectrum in warfare
